

# City of Chula Vista - Bikeway Master Plan Update - 2011

## Bikeway Facility Types

### Class 1 (Bike Path)

Separate right-of-way away from motor vehicular traffic. Used for connections through open spaces and parks, where adjacent roadway speeds and volumes are too high for safe joint use, or where no other facility type is feasible.

8' paved + 2' graded edge min. for two-way (Greater width recommended for high bike or mixed use volumes)

Children, Family Recreational, Adult Exercise, Skaters, Joggers, Recreational Walkers, Exercise Walkers

### Class 2 (Bike Lane)

Within vehicular right-of-way, but delineated by warning symbols and striping. May be used where roadway speeds and volumes are fairly high, but adequate roadway width is available. Directness and number of users are significant factors.

4' min. total width where curb occurs, 5' adjacent to parking (Wider bike lane recommended where bike volumes are high)

Adult Recreational, Commuters and Serious Cyclists

### Class 3 (Bike Route)

Within vehicular right-of-way, but typically delineated by directional signage and shared lane markings where needed. Used where roadway speeds and volumes are fairly low, and where route directness and number of users is not likely to be significant. Primarily for route directions on suggested roadways.

(Wider than standard outside lane recommended)

Children, Commuters and Serious Cyclists
